

### 301 Hyperemesis Gravidarum

#### Kansas Risk Factor Summary

Risk Factor Code	Kansas Risk Factor Title	High Risk	Auto-Assigned	Based on MD Diagnosis	Category and Priority					USDA Revised Date
					PG	BF	PP	I	C	
301	Hyperemesis Gravidarum	X		X	1					06/18

#### Kansas Risk Factor Definition

Presence of Hyperemesis Gravidarum diagnosed by a physician as self-reported by the client, or as reported or documented by a physician, or someone working under physician's orders. Hyperemesis Gravidarum is defined as severe and persistent nausea and vomiting during pregnancy which may cause more than 5% weight loss and fluid and electrolyte imbalances. This nutrition risk is based on a chronic condition, not single episodes. Hyperemesis Gravidarum is a clinical diagnosis, made after other causes of nausea and vomiting have been excluded.

#### [USDA Justification](#)

**Note:** USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
