

111c Overweight >6 mos postpartum

Kansas Risk Factor Summary

| Risk Factor Code | Kansas Risk Factor Title | High Risk | Auto-Assigned | Based on MD Diagnosis | Category and Priority | | | | | USDA Revised Date |
|------------------|------------------------------|-----------|---------------|-----------------------|-----------------------|----|----|---|---|-------------------|
| | | | | | PG | BF | PP | I | C | |
| 111c | Overweight >6 mos postpartum | | X | | | 1 | | | | 07/09 |

Kansas Risk Factor Definition

Overweight, greater than or equal to six (≥6) months postpartum:
Current Body Mass Index (BMI) ≥25*

* Until research supports the use of different BMI cut-offs to determine weight status categories for adolescent pregnancies, the same BMI cut-offs will be used for all women, regardless of age, when determining WIC eligibility.

[USDA Justification](#)

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
