

### 343 Diabetes Mellitus

#### Kansas Risk Factor Summary

| Risk Factor Code | Kansas Risk Factor Title | High Risk | Auto-Assigned        | Based on MD Diagnosis | Category and Priority |    |    |   |   | USDA Revised Date |
|------------------|--------------------------|-----------|----------------------|-----------------------|-----------------------|----|----|---|---|-------------------|
|                  |                          |           |                      |                       | PG                    | BF | PP | I | C |                   |
| 343              | Diabetes Mellitus        | X         | X<br>PG, PP, BF only | X                     | 1                     | 1  | 3  | 1 | 3 | 07/09             |

#### Kansas Risk Factor Definition

Presence of diabetes mellitus diagnosed by a physician, as self-reported by client; or as reported or documented by a physician, or someone working under a physician’s orders.

- Diabetes mellitus consists of a group of metabolic diseases characterized by inappropriate hyperglycemia resulting from defects in insulin secretion, insulin action or both.

#### [USDA Justification](#)

**Note:** USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
