

## 601c Breastfeeding Mother of Priority 4 Infant

### Kansas Risk Factor Summary

Risk Factor Code	Kansas Risk Factor Title	High Risk	Auto-Assigned	Based on MD Diagnosis	Category and Priority					USDA Revised Date
					PG	BF	PP	I	C	
601c	Breastfeeding Mother of Priority 4 Infant					4				05/15

### Kansas Risk Factor Definition

A breastfeeding woman whose breastfed infant has been determined to be at priority 4 nutritional risk. Do not use if the woman has already been determined to be at priority 1 or 4 nutritional risk. Note: If the infant was certified first and the infant’s priority does not match, KWIC displays a warning. Then staff can assign the appropriate breastfeeding dyad risk factor to make the client with a lower priority equal to the other dyad member’s priority.

### [USDA Justification](#)

**Note:** USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
