Kansas Risk Factor Definition
Diagnosis of oral health conditions a physician, dentist, or someone working under a physician’s orders as self-reported by client; or as reported or documented by a physician or dentist, or someone working under physician’s orders. Includes, but is not limited to:
- Dental caries/cavities/tooth decay;
- Periodontal disease (either stage – gingivitis or periodontitis); and
- Tooth loss, ineffectively replaced teeth or oral infections which impair the ability to ingest food in adequate quantity or quality.

USDA Justification
Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
