Kansas Risk Factor Definition

Presence of hypertension or prehypertension diagnosed by a physician as self-reported by client; or as reported or documented by a physician, or someone working under physician's orders.

- Hypertension: >140/>90 mm Hg.
- Prehypertension: 120-139/80-89 mm Hg.

KWIC will auto-assign if “Yes” is marked for the KWIC Health Interview question “Do you have high blood pressure or pre-high blood pressure (>120/80) when you are not pregnant?”

USDA Justification

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
