**Kansas Risk Factor Definition**

Presence of Celiac Disease (CD) diagnosed by a physician as self-reported by client; or as reported or documented by a physician or someone working under physician's orders. CD is an autoimmune disease precipitated by the ingestion of gluten (a protein in wheat, rye, and barley) that results in damage to the small intestine and malabsorption of the nutrients from food. Celiac Disease is also known as:

- Celiac Sprue;
- Gluten Enteropathy; or
- Non-tropical Sprue.

**USDA Justification**

*Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.*
