

360 Other Medical Conditions

Kansas Risk Factor Summary

Risk Factor Code	Kansas Risk Factor Title	High Risk	Auto-Assigned	Based on MD Diagnosis	Category and Priority					USDA Revised Date
					PG	BF	PP	I	C	
360	Other Medical Conditions			X	1	1	5	1	3	04/01

Kansas Risk Factor Definition

Presence of medical condition(s) with nutritional implications that are not included in any of the other medical conditions diagnosed by a physician as self-reported by caregiver; or as reported or documented by a physician, or someone working under physician’s orders. The current condition, or treatment for the condition, must be severe enough to affect nutritional status. Includes, but is not limited to:

- Juvenile rheumatoid arthritis (JRA);
- Lupus erythematosus;
- Cardiorespiratory diseases;
- Heart disease;
- Cystic fibrosis; or
- Persistent asthma (moderate or severe) requiring daily medication.

[USDA Justification](#)

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
