Kansas Risk Factor Definition

Presence of a hereditary or congenital condition at birth that causes physical or metabolic abnormality, such as genetic and congenital disorders as diagnosed by a physician as self-reported by caregiver; or as reported or documented by a physician, or someone working under physician’s orders. The current condition must alter nutrition status metabolically, mechanically, or both. May include, but is not limited to:

- Cleft lip or palate;
- Down’s syndrome;
- Thalassemia major;
- Sickle cell anemia (not sickle cell trait); and
- Muscular dystrophy.

USDA Justification

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
