					PG	BF	PP	I	C	
428	Assumed Risk for I & C btn 4 & 24 Months							4	5 C <24 mo	03/05

Kansas Risk Factor Definition

An infant greater than or equal to four (≥ 4) months of age who has begun to or is expected to begin to 1) consume complementary foods and beverages, 2) eat independently, 3) be weaned from breast milk or infant formula, or 4) transition from a diet based on infant/toddler foods to one based on the Dietary Guidelines for Americans, is at risk of inappropriate complementary feeding. This risk factor may only be assigned **after a thorough Nutrition Assessment has been conducted and no other risk factors are identified.**

[USDA Justification](#)

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
