Kansas Risk Factor Definition
Routinely using a substitute for breastmilk or for FDA approved iron-fortified formula as the primary nutrient source during the first year of life. Examples of substitutes include:

- Low iron formula without iron supplementation;
- Cow’s milk, goat’s milk, or sheep’s milk (whole, reduced fat, low-fat, skim);
- Canned evaporated or sweetened condensed milk; and
- Imitation or substitute milks (such rice- or soy-based beverages, non-dairy creamer), or other “homemade concoctions”.

USDA Justification
Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
