

382 Fetal Alcohol Spectrum Disorders

Kansas Risk Factor Summary

Risk Factor Code	Kansas Risk Factor Title	High Risk	Auto-Assigned	Based on MD Diagnosis	Category and Priority					USDA Revised Date
					PG	BF	PP	I	C	
382	Fetal Alcohol Spectrum Disorders			X	1	1	3	1	3	4/01

Kansas Risk Factor Definition

Presence of condition diagnosed by a physician as self-reported by the caregiver; or as reported or documented by a physician, or someone working under physician’s orders. Fetal Alcohol Spectrum disorders (FASDs) are a group of conditions that can occur in a person whose mother consumed alcohol during pregnancy. FASDs is an overarching phrase that encompasses a range of possible diagnoses, including fetal alcohol syndrome (FAS), partial fetal alcohol syndrome (pFAS), alcohol-related birth defects (ARBD), alcohol-related neurodevelopmental disorder (ARND) and neurobehavioral disorder associated with prenatal alcohol exposure (ND-PAE).

[USDA Justification](#)

Note: USDA Justification is provided because it explains nicely why the risk is important. However, you must use the Kansas risk factor names and definitions which may differ slightly from the USDA document.
