

**Listing of Classified Streams:
Designated Use Status
(other than Recreational Use)
and
Use Attainability Analysis Status**

This listing developed in compliance with K.S.A. 82a-2004(b)

October 14, 2002

prepared by

Kansas Department of Health and Environment
Division of Environment
Bureau of Environmental Field Services
1000 SW Jackson, Suite 430
Topeka, Kansas 66612

Preface

The Kansas Department of Health and Environment is responsible for designating uses of surface waters as a part of establishing surface water quality standards. Designated uses are listed in the *Kansas Surface Water Register* and adopted by reference in regulation (K.A.R. 28-16-28d). A use attainability analysis (UAA) is a procedure to evaluate water bodies and assign designated uses. The federal regulations (40 CFR 131.10) allow a State to designate a use without conducting a UAA, but a UAA must be conducted to remove a designated use. The 1999 *Kansas Surface Water Register* listed 2,173 stream segments for which the Department had not conducted a UAA for all designated uses (excluding recreational use); six segments had at least one designated use (excluding recreational use) determined not attainable; 49 stream segments have completed UAAs for all designated uses (excluding recreational use).

In compliance with Substitute Senate Bill 204 enacted by the 2001 Legislature (K.S.A. 82a-2004(b)), the Department is to make public a listing of currently classified stream segments for which:

- designated use attainability analyses for use other than recreational use have been completed;
- use other than recreational use has been determined not attainable;
- designated use attainability analyses for use other than recreational use have not been completed.

For the purposes of this listing, the term “been completed” means that the use has been adopted in state regulation and approved by U.S. EPA.

Explanation of notations used in the listing:

HUC	=	hydrologic unit code
R	=	river
Cr	=	creek
Fk	=	fork
Br	=	branch
M	=	middle
X	=	referenced stream segment is designated for the indicated designated use
0	=	referenced stream segment does not support the indicated designated use; i.e. use not attainable
AL	=	aquatic life use
S	=	special aquatic life use water
E	=	expected aquatic life use water
R	=	restricted aquatic life use water
DS	=	domestic water supply use
FP	=	food procurement use

- GR = ground water recharge
- IS = industrial water supply use
- IR = irrigation use
- LW = livestock watering use
- = capacity of the reference stream segment to support the indicated designated use has not been determined
- 1 = use attainability analysis completed for designated use
- 3 = use attainability analysis not completed for designated use
