

Kansas Flu by the Numbers

799,733* Patients Vaccinated
2019-2020

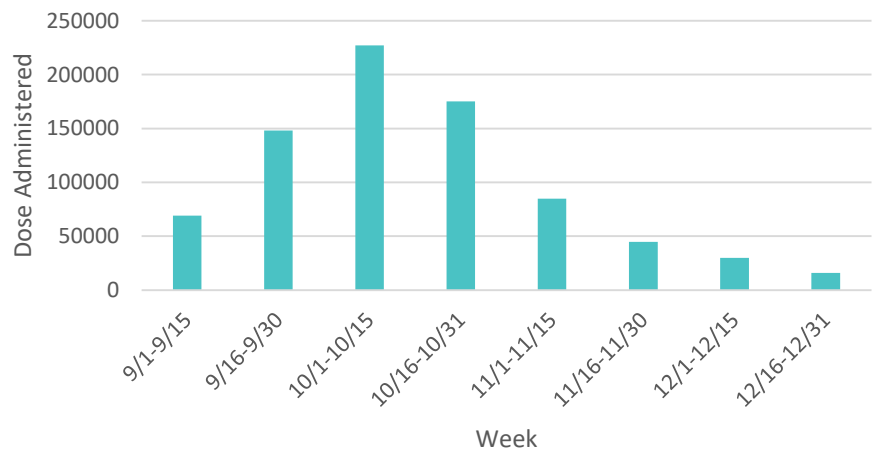

856,994 Patients Vaccinated
2020-2021

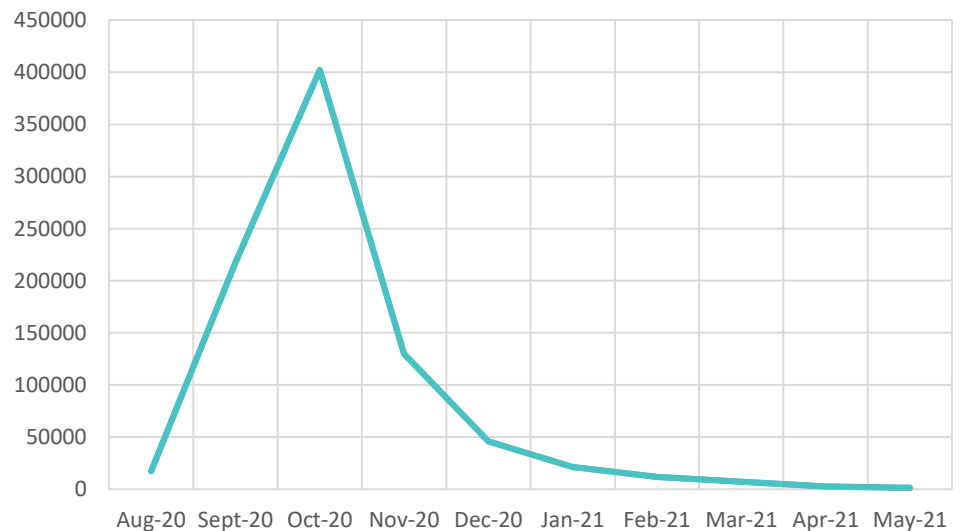

Patients got their flu vaccines *earlier* in the 2020-2021 season than in previous years.

More patients received influenza vaccines than the previous year.

Influenza Vaccine Doses Administered by Week September - December 2020

Influenza Vaccine Doses Administered by Month 2020-2021 Influenza Season

Data Source: Kansas Immunization Information System (WebIZ) downloaded on 7/23/2020. There are limitations for WebIZ data. Not all providers who administer immunizations report immunization data to WebIZ and not all persons in Kansas are represented in WebIZ so the accuracy of vaccination coverage rates is unknown.

* This is the current data that was downloaded from WebIZ on 9/21/2021. This reported number is a decrease from the number reported when our fact sheet went out last year. The discrepancy is likely due to concerted efforts that have been done to remove duplicative vaccine reporting that occurred during the 2019-2020 season.
