

## **APPENDIX K**

### **Lake Visitation Potential**

## LAKE VISITATION POTENTIAL MULTIPLICAND EXPLANATION

In determining a lake's visitation potential, the following equation was used:

$$\text{Population 30} \times \text{Lake Size Factor} \times \text{Lake Density Factor} \times \text{Public Access Factor} \times \text{Contact Recreation Factor} = \text{Lake Visitation Potential}$$

The following table is an explanation of the multiplicands in the above equation:

<b>Population 30</b>	Population within 30-mile radius		
<b>Lake Size Factor</b>	Based on lake size in acres, divided into classes and then assigned size factors:		
	<b>Size Class</b>	<b>Size Factor</b>	
	<1 acre =	<b>.001</b>	
	1 – 5 acres =	<b>.01</b>	
	5 – 50 acres =	<b>0.1</b>	
	50 – 500 acres =	<b>0.5</b>	
	500 – 1000 acres =	<b>1.0</b>	
	> 1000 acres =	<b>2.0</b>	
<b>Lake Density Factor</b>	Based on number of lakes within 30 mile diameter and then assigned density factors:		
	<b>Number of Lakes</b>	<b>Density Factor</b>	
	1 to 3 lakes =	<b>1.0</b>	
	4 to 6 lakes =	<b>0.8</b>	
	7 to 16 lakes =	<b>0.6</b>	
	> 16 lakes =	<b>0.4</b>	
<b>Public Access Factor</b>			
	<b>Private Lake</b>	<b>Open to Public</b>	
	<b>1.0</b>	<b>0.1</b>	
<b>Contact Recreation Factor</b>			
	<b>Definition</b>	<b>Primary Contact Attainability</b>	<b>Recreation Factor</b>
	Swimming beach/boating/skiing facilities provided.	Attainable	CR A = <b>1.0</b>
	Swimming/boating facilities not provided but water depth greater than 18 inches.	Attainable	CR B = <b>0.5</b>
	Waterbody less than 18 inches in depth. Full immersion not likely.	Not Attainable	CR a = <b>0.1</b>

## HAB KANSAS LAKE RANKING FOR VISITATION POTENTIAL

Top 25% in visitation potential are in the shaded rows; Lower 75% are in the unshaded rows

Lake Name	Pop_30	Acres	Size Class	Size Factor	Lake_30	Lakes Factor	Private	CR	Contact Factor	PWS	Final Score
