

# KS-SHCN Care Coordination

The Kansas Special Health Care Needs program (KS-SHCN) Care Coordination model assists clients and families in navigating health care and other systems to achieve a holistic approach in meeting their or their child's health needs.

This program is offered free to any individual and their family who have a SHCN or disability. This is a voluntary program and all individuals have the option of opting out or back in at any time.

*Our goal is to empower families and individuals to feel confident in navigating services and supports while having a consistent person available to them for assistance, support, and understanding as they meet their goals.*
