KANSAS INFORMATION NOTICE 02-1

RADIOACTIVE MATERIAL RECOVERY
PROGRAM

Addressees

All Kansas Well Logging, Portable gauge and Educational licensees

Purpose

To inform licensees of a radioactive material recovery program being performed by Los Alamos National Laboratory of the Department of Energy.

Description of Circumstances

Los Alamos National Laboratory of the Department of Energy has implemented a program to recover sealed sources containing Am-241 or Pu-238.

Discussion

An estimated 18,000 sealed source devices will become unwanted over the next decade. This program focuses on the problem of sources and devices for which there are no disposal options.

The program is limited to licensees possessing less than 10 sealed sources requiring disposal and only sealed sources containing Am-241 or Pu-238 are being accepted for recovery.

According to information provided to KDHE, the program is fully funded by the Department of Energy. There are no costs on the licensee to participate in this recovery program. In many cases arrangements can be made to have the sealed sources collected at the licensee's facility. The Department of Energy will take ownership of the radioactive material once it is received. This is a limited time offer and prompt action is suggested.

This information notice does not require any specific action or written response.

The appearance of a name on this list is not a recommendation by this agency that the service or equipment offered will be that needed by you or that said company is willing or able to make any arrangements suitable to your purposes. The list is prepared by assembling names and addresses of persons who advertise they provide such a service or equipment. No attempt is made by this agency to determine if the advertised service or equipment is adequate or even delivered. You should contact those of your choice and determine by your own investigation whether the service provided is adequate to meet your needs and if so, a mutually agreeable arrangement can be reached.
